EDUCATION

McMaster University

Bachelor of Engineering (B.Eng) – Software Engineering

- GPA: 10.5/12 – Dean's Honour List

Hamilton, ON

Sept 2023 – Present

EXPERIENCE

Junior Software Developer

Feb 2026 – Aug 2026

Pillar To Post Home Inspectors

Remote

- Participated in the full feature lifecycle for CRM data tools, defining user stories and business logic with stakeholders, implementing the resulting features, and performing QA validation before release
- Built self-service CSV export tools in Django, including a pending-appliance-data endpoint and a batch inspection ID scrape/lookup page, replacing manual data-pull requests with on-demand reporting
- Implemented AJAX-driven brand autocomplete search using Select2 with server-side filtering and infinite scroll, significantly improving search speed over the previous static dropdown
- Developed Python scripts to synchronize local development environments with data from production and staging environments hosted on AWS, streamlining the developer workflow

Software Development Engineer in Test

Sept 2025 – Jan 2026

Pillar To Post Home Inspectors

Remote

- Developed Python-based automated test suites to validate backend workflows, REST APIs, and data pipelines, reducing manual testing effort by 40%
- Performed API and integration testing for Salesforce and HubSpot backend services using Postman and Python, identifying 15+ critical issues before production

Software Developer

May 2024 – Aug 2024

McMaster Research – Drasil Project

Hamilton, ON

- Led backend compiler development by implementing Set data structures in a DSL using Haskell, enabling multi-language code generation for Python, Java, and C++
- Refactored arithmetic operators across 60+ files, improving backend code maintainability and reducing code duplication by 30%

PROJECTS

SpecGen | *Java 21, Spring Boot, YAML, FreeMarker, IBM watsonx, PostgreSQL, JUnit 5*

- Built a Spring Boot REST API generating Java entities, services, controllers, repositories, DTOs, and exception handlers from YAML specs, with SnakeYAML-based validation for naming, types, constraints, and relationships
- Integrated IBM watsonx AI to convert plain-English data-model descriptions into validated SpecGen YAML specifications
- Added FreeMarker-based template rendering with Java/PostgreSQL type formatters, packaging generated projects into downloadable ZIP archives, validated with JUnit 5, Mockito, and AssertJ

ChitChat | *Node.js, Express, Socket.IO, PostgreSQL, JWT*

- Designed and implemented backend REST APIs with JWT-based authentication, supporting secure real-time messaging for 50+ concurrent users
- Implemented asynchronous WebSocket communication using Socket.IO to handle concurrent client connections with sub-100ms latency
- Designed PostgreSQL schema and optimized queries using indexing and pagination to improve message retrieval performance

TECHNICAL SKILLS

Languages: Java, Python, JavaScript, C, Haskell, SQL

Backend & APIs: Spring Boot, Node.js, Express, Django, React, REST APIs, JWT Authentication, WebSockets, Microservices

Databases & Data: PostgreSQL, SQL, JPA/Hibernate, Database Design, Data Modeling

Testing & Tools: JUnit, Integration Testing, API Testing, Postman, Maven, Git, Linux, AWS, Azure DevOps

Concepts: OOP, SOLID, Backend System Design, Compiler Design, DSLs, Agile/Scrum, Algorithm Design
